Lighting

From Autumn 2011 all fully finished Anglia Dolls Houses include a package of lights as standard. The lights are carefully chosen from a variety of suppliers and are subject to availability. In order to control cost, the lights are usually imported units. They are installed using an appropriate capacity robust Smallworld digital transformer and Easy Wire fused distribution strip. If you prefer to specify your own choice of lights I can build these in for you. Wiring is concealed behind a false back panel, under lift up floorboards and also down the chimney breasts. The way that the wiring is done makes it easy for you to add further lights at a future date.

Reception room with ceiling and wall lights and a glowing hearth.

Sockets are provided as standard for the connection of hearth lights in the supplied fireplaces and inglenook arches for kitchen ranges. To protect the wiring and to allow the dolls house to be located flush to a wall, a concealed cavity is provided either behind cupboard stairs or under the roof within which the distribution strip is hidden. No soldering or drilling for ceiling lights is required as the Easy Wire distribution strip has screw terminals: simply remove the false back panel and thread the wires through the holes and channels already provided.

For customers who are nervous about wiring or find miniature socket wiring too fiddly, the fully installed package of lights is ideal. When the house is delivered and installed you can just plug in the transformer and the lights just work.

Standard lighting packages content

The lights included in the standard packages come from a variety of suppliers and are subject to availability. As a guide, pictures of the principal units used are set out below in room settings. The units will be of a style and quality similar to (or better than) those shown:

<p>Deluxe wall candle</p>		<p>Wall candle (Double)</p>	
<p>Deluxe wall candle (Double)</p>		<p>Hall lantern</p>	
<p>Deluxe 6-arm chandelier</p>		<p>Oil lamp</p>	
<p>Wall candle</p>			

The packaged combination of lights for each house is set out below. The boxes in the tables represent the rooms of the house when viewed from the front.

What to do next?

If you order a fully finished dolls house then the standard lighting package is included. For customers who want to select their own lighting combinations, each standard house has a room diagram on which you can write the part numbers and quantities of the lights and hearths that you want installed in each room. Part numbers are taken from a lighting supplier's catalogue. Anglia Dolls Houses then sources the lights and a Smallworld transformer suitable for the calculated load and quotes you for their supply and their fitting. Large numbers of wall lights may incur an additional fee. Ask for a room diagram when you visit Anglia Dolls Houses to discuss options.
